

Time to change

The needs of the industry are changing. Timing is crucial. Reclassification of traditional chelates and chemicals demand a new approach. It is time to change to more environmentally-friendly alternatives.

At AkzoNobel Chelates, we think about the future, but act in the present. Our green chelate Dissolvine® GL is an exceptional good replacement for NTA and Phosphates.

Green aspects:

- Readily biodegradable
- Based on a natural & sustainable source
- No contribution to eutrophication
- Excellent eco & toxicological profile

Unique properties:

- Excellent in tea stain removal compared to alternative sequestrants
- Superior to phosphates and citrates on weight basis
- Better performance than EDTA and equal to NTA on weight basis
