

## IT. Inspired Technology.

Your operations are our focus. Literally.

Just look at Kimona Häggström, one of our process engineers. Part of a group connected 24–7, she monitors chlorine dioxide and Purate plants at mills across Europe.

Eka's industrial IT is a clever, safe and cost-efficient means of working together to assure access to essential chemicals. Especially since Kimona sees her job as more than just supervision – she's always on the lookout for ways to improve your processes.

Kimona's past in R&D has given her in-depth insight, extending from molecules to full-scale production. But as she says, there's no such thing as a magic wand. And that's what makes the job fun. Every mill is different, and it takes close cooperation with your mill's onsite operators to get the job done. Even at a distance!

Inspiring paper all over the world is our inspiration. Meet us at [eka.com](http://eka.com).
