

A photograph of a large industrial building with blue corrugated metal siding and a long row of windows. A white banner with the AkzoNobel logo is visible on the side of the building. The sky is clear blue. In the foreground, there is a paved area with yellow diagonal stripes and a yellow metal railing. A utility pole is visible on the left side of the image.

Regenerative Thermal Oxidiser (RTO) Update

AkzoNobel

Odour Update

- Golder have completed emissions audit of the site in line with EPA notice. Final report due to be submitted in January 2022.
- Investigating sources of fugitive emissions from paint plant. This will form part of the emissions audit findings.
- Reports of 'Burning Acrid' smell – Investigated and not identified on site sources. Will continue to monitor.

Air Monitoring Updates

Fence line air quality monitoring for VOCs

- ❑ Monitoring undertaken by Golder Associates' NATA-accredited air quality team
- ❑ 8 fence line monitoring locations
- ❑ 24-hr hour monitoring, every 6 days (1-in-6 day) from March to October
- ❑ VOC compounds:
 - ❑ Toluene
 - ❑ Ethylbenzene
 - ❑ Total xylenes

VoC Update

- ↗ Continuing monthly VoC monitoring
- ↗ All reports and results have been published on website
- ↗ Monitoring continues to show levels of VoC's significantly below the threshold's values
- ↗ Introduced Odour Monitoring at the boundary after feedback from last forum

Noise Review

Noise Review

- Powder Plant continues to cease operations at night.
- Powder Mill fan upgrade has improved overall noise levels
- Replacement gearbox of DT 5 planned for Mid-Nov. (Currently not running at night)
- Noise reduction plan is being developed from noise survey
- Focus on engineering controls to eliminate noise sources

➤ Acoustic Wall

- Identified as best solution to make significant impact to noise levels
- Engineering and scoping underway
- Council submission – Early Nov
- Installation pending council approval. Installation will take approx. 12 weeks.
- Neighborhood feedback on wall design and look
